## RICH GOLD FIND OVER IN WYOMING

Discovery in Copper Mountain District, Six Miles From Boysen.

Williams find of two weeks ago, which to say: created so much excitement, and a larger vein is shown. Many samples of quartz are being exhibited here, all fairly speckled with free gold. The ledge is from two to eight feet in thickness, is free milling, and some of the rock will run as high as \$1,700 to the top.

The new find is about six miles north The new find is about six miles north of the copper mines being operated by the Boysen Mining company and is on a trail that has been traveled over and prospected for the past thirty years. The shares of the Wind River Mining company for whom Hale was prospecting, have been taken off the market and cannot be bought at any price. Half the population of this city have left for the scene of the find and will stake out claims as near as possible to it. Miners are flocking from every direction, but a great many of the claims were taken up two weeks ago at the time of the Williams find.

#### LIME FLUX FOR SMELTER.

#### Great Quarries Being Opened Near Topliff, in Rush Valley.

Lehi, Aug. 27.—Men from Rush Valley, about seven miles south of Mercur, say that a new town is springing up at a place called Topliff and that the prospects are that the camp will in a few weeks be shipping over 1,000 tons of lime rock per day to the Salt Lake valley smelters, the Lehi sugar factory and the sugar mill at Garland.

The United States Smelting company about one year ago opened up a quarry

The United States Smelting company about one year ago opened up a quarry here and is now supplying its plant at Bingham Junction with about 400 tons per day. The rock contains less than 2 per cent silica and Superintendent Lorenzo Price says that he is loading it on the cars at a cost ranging between 25 and 30 cents per ton, and hopes in the future to materially reduce this figure.

Bingham Junction with about 400 tons per day. The rock contains less than 2 per cent silica and Superintendent Lorenzo Price says that he is loading it on the cars at a cost ranging between 25 and 30 cents per ton, and hopes in the future to materially reduce this figure.

Recently the American Smelting and Refining company has purchased 640 acres adjoining the U. S. property on the south and has a corps of surveyors running a line for the railroad into their property. The surveyors are also making a survey for a crushing plant and have run a survey for the power line, three miles distant, and which will be made to supply the power to run the crusher, machine drills, etc. Manager Whitley thinks he has the biggest ledge of good commercial conditions, and if we are to run up against a stant, and which will be made to supply the mountain and is over a mile in length. There is practically no waste in it, and the assayers give results showing an average of less than 2 per per cent insoluable matter with a small per cent of iron, which latter practically overcomes the per cent of silica, making an ideal fluxing material. The company has a force of men opening the quarry and it will be ready to supply the 500 tons per day demanded of it as soon as the railroad is completed to the property.

The Utah Sugar company has just completed the extension of the Topliff spur into the Lime King quarry, which lies south of the United States property and west of the recently acquired property of the American company. It will commence at once to shap rock to the Lehl factory and the Garland plant, consuming about 10,000 tons this season. This rock shows just fifteen one-hundredths of one per cent silica and Superintendent Gardner says that

one-hundredths of one per cent silica and Superintendent Gardner says that it is the best lime rock used by any Sugar company in America, and attributes much of the success attained by the Lehi sugar factory in making its high grade product to the purity of the lime rock used in refining it.

Tables of Owner's Design Said to Outclass Others.

Colonel E. A. Wall, who has equipped the Old Dewey mill with machinery and ore treating tables of his own design, has treated mining men to something of a surprise in throwing his plant open to

### NATURAL GAS OCCURRENCE.

#### Features as They Exist in This Valley Described.

During the summer of 1904, natural gas was found escaping from a number of water wells in the valley of Jorber of water wells in the valley of Jordan river, Utah, says one of the sheets issued by the geological survey. Examination by G. B. Richardson, of the United States geological survey, revealed the fact that natural gas was of common occurrence in the vicinity of Salt Lake City. About eight years ago this field was extensively prospected, and for over a year the city was supplied with natural gas. Though the quantity obtained proved insuffice in the control of the control of the control of the sheets of the sheets of the sheets in the says of the sheets of the sheets of the sheets in the sheets of the sheets is under the sheets of the sheets of the sheets is under the sheets of the sheets of the sheets of the sheets is under the sheets of the sheet of the sheets of the sheet of the sheets of the sheet of the sheets o

pected, and for over a year the city was supplied with natural gas. Though the quantity obtained proved insufficient, gas is still found in greater or less abundance, and sporadic attempts have been made to further develop the field. It seemed to Mr. Richardson desirable, therefore, to record in the survey's year book, "Contributions to Economic Geology, 1904," the little that is known of, natural gas in this vicinity. Natural gas occurs at a number of localities along the eastern shore of Great Salt Lake, notably in the vicinity of Brigham and Corinne, near the mouth of Bear river, and in the vicinity of Salt Lake City, adjacent to the mouth of Salt Lake City, adjacent to the mouth of Jordan river. Near Salt Lake City gas has been found in an ill-defined area, extending at least ten miles west of the city and fifteen miles north, as far as Farmington. This area was formerly occupied by Lake Bonneville, the Pleistocene predecessor of Great Salt Lake.

Though gas has been found in num-

Though gas has been found in numerous wells within this area, the greatest development has occurred about twelve miles north of Salt Lake City, in the marshy tract near the shore of Creat Salt Lake Creaters. Though gas has been found in numerous wells within this area, the greatest development has occurred about twelve miles north of Salt Lake City. In the marshy tract near the shore of Great Salt Lake. Gas is reported to have been discovered in this region in 1892, and in the winter of 1894-5 a sixinch pipe line was laid to Salt Lake City. In an area of only one square mile, about twenty wells were runk. Gas occurs at different depths in the area developed, but mostly between 400 and 760 feet. In one well three gas horizons were struck, at 502, 542 and 602 feet, In another well, 800 feet deep, and 760 feet. In one well three gas horizons were struck, at 502, 542 and 602 feet. In another well, 800 feet deep, nine "good, strong flows" of gas are reported. The gas is said to occur in reported. The gas is said to occur in sand which is underlain and overlain by clay, the beds ranging from three to twenty feet in thickness. The productive sands are reported generally free from water, although small artesian flows were found in overlying beds. The pressure of the gas in the wells is said to have averaged about 200 provided and a maximum research.

pounds, and a maximum pressure of 250 pounds has been recorded.
For nineteen months Salt Lake City was supplied from this source, but the amount produced is not definitely known. From the beginning trouble was caused by the gas coming spasmodically. The supply finally decreased until, it became insufficient for the city's needs and the field was abandoned.

the presence of porous reservoirs effectively capped by impervious material to collect and retain the hydrocarbons. Unfortunately, in the Bonneville area the presence of such conditions can not be predicted. It may be stated though, that prospecting for gas should not be undertaken in the vicinity of the base of the mountains, where recent faulting has taken place. Actual occurrence of gas in this region can be discovered only by the drill.

REPORT ON CACTUS MINE.

#### SAMPLES ASSAY \$1700 TON Synopsis of What Geological Expert

Saw There. In a recent bulletin issued by the RUSH IS ON FROM TOWN OF THERMOPOLIS.

In a recent bulletin issued by the geological survey considerable space is given to a description of what is being accomplished at the Cactus property of the Newhouse Mines & Smelters corporation by Professor S. F. Emmons, This description comes in advance of the detailed study of the entire district which the survey will soon undertake. A portion of the article relates to improvements that were under way at the time of the professor's visit and, as they are not up to date, they will be of no interest to the reader now. Of the mine itself, the article has this to say:

"The ore of the Cactus mine is mainly pyrite, generally rather coarsely crystalline, with a little chalcopyrite. It contains practically no lead or zinc. It carries a little silver and a fraction of an ounce of gold, the precious metals, it is claimed, being sufficient in amount to repay the cost of mining and concentration. The deposits are widently the improvement evidently the impregnation by pyrit-ous ore of a strong fault zone, and the structural conditions indicate that this fault zone may be a northern continualault zone may be a northern continua-tion-possibly a branch—of the Horn-Silver fault. If this assumption proves to be correct, it is probable that the fault zone continues farther to the northwest, across the gravel'slopes at the west base of Golden Horn Peak, and an extension of the copper deposits in that direction might naturally be looked for.

northwest, across the gravel slopes at the west base of Golden Horn Peak, and an extension of the copper deposits in that direction might naturally be looked for.

"It is a singular fact that, while in the Horn Silver deposit lead and zinc have been the predominant metals, copper occurring as an important consentrated by secondary enrichment, in the Cactus mine copper and the omnipresent iron sulphides are practically the only metals found. It will be of interest to see whether a geological "It is a singular fact that, while in the Horn Silver deposit lead and zinc have been the predominant metals, copper occurring as an important constituent only when it has been reconcentrated by secondary enrichment, in the Cactus mine copper and the omnipresent iron sulphides are practically the only metals found. It will be of interest to see whether a geological study of the region will succeed in establishing a genetic reason for this association of minerals and in determining whether, as suggests itself at first glance, it is due to the different character of the country rocks that inclose the different deposits."

## the Big Demand.

class Others.

Colonel E. A. Wall, who has equipped the Old Dewey mill with machinery and ore treating tables of his own design, has treated mining men to something of a surprise in throwing his plant open to the inspection of all comers, says the Bingham Bulletin. "No Keep Out" signs for me," said the genial colonel, in his characteristic, good-natured way, "Whatever I may have here that may be of interest to mining men or others, is open to inspection," he says.

The tables designed by Colonel Wall are figuratively speaking, running away with those of other patterns, one of which he has in operation alongside of his own to demonstrate the correctness and practicability of his theotries. The Dewey mill, which is under the supervision of Fred H. Bemis, is running full capacity, and another shift will be put on as soon as teams can be secured to haul the ore from the Phoenix mine, which is supplying most of the output at present.

With the improvements designed by Colonel Wall, the Dewey mill is treating ores at the unprecedentedly low cost of 50 cents per ton, a figure some mill men are inclined to sneeze at. It is particularly for them that Colonel Wall has put up a sign "Walk In."

and Matthew Richards. Local men have abond and lease on the property at present. The velin is exceedingly well defined that the clampor the character of any importance found has the distinction of the character of any importance found has the distinction of the character of any importance found has the distinction of the character of any importance found has the distinction of the character of any importance found has the distinction of the character of any importance found in the canyon since operations stopped on the Major Evans a number of years ago.

Operations at the Lone Pine are on in full bloson be on the market with some or ethat will surprise the natives. They have developed enough to enable them to work a larger force of men shipments will be made regularly.

GOLD MOUNTAIN BUDGET.

#### Easterners Visit Mines-Standard and Beecher Hill Bonded.

Richfield, Aug. 26.—Seymour W. Tulloch, president of the Sevier Consolidated Mining company, arrived from Washington, D. C., on his way to inspect, the property on Gold Mountain. Mr. Tulloch was accompanied by Dr. Welch of Washington, who is a heavy stockholder in the company and despect the property of the company and despect the property of the company and despect the president of the company and despect the president of the company and despect the president of the president

Mr. Tulloch was accompanied by Dr. Welch of Washington, who is a heavy stockholder in the company and desired to visit the property while on his way to the coast on a pleasure trip. President Tulloch stated that machinery was now on the way for the new mill and was being shipped from the east as fast as the machinery companies could load it on the cars. It will commence to arrive at Sevier in a few days, and there will be no time lost installing the new plant.

Mr. Tulloch says the stockholders of the company are all well pleased with the plans of the new mill, and are anxious to get the mill in running order as soon as possible. The mine is looking its best, and a large force is employed in blocking out ore for the new mill when it is put into commission.

A number of business men of New York, consisting of H. C. Wood of Morrisville, Charles S. Hutchinson of Syracuse, L. W. Burroughs of Morrisville, Joseph F. Thompson of Oneida and F. L. Vanslyka of Utica, arrived here this week and spent a couple of days on Gold Mountain inspecting the properties of the Log Cabin and Gold Development companies, in which they all are interested very heavily. After inspecting these two properties they went over to Kimberly and visited the Annie Laurie mine.

They were favorably impressed with

Annie Laurie mine.

They were favorably impressed with the showing of the Log Cabin and Gold Development properties, and expressed themselves that the companies are working right to open up one of the biggest mines in Gold Mountain. They also expressed themselves as confident

the only metals found. It will be of interest to see whether a geological study of the region will succeed in establishing a genetic reason for this association of minerals and in determining whether, as suggests itself at first glance, it is due to the different character of the country rocks that inclose the different deposits."

POSITION OF COPPER.

Some of the Causes That Are Making the Big Demand.

Iy. It is reported that a bond has been given on the Standard and Beecher Hill properties, which are in the Marysvale district, to a well-known esterm syndicate, and that a number of other properties in this district will be taken over under similar terms by the same syndicate in the near future. Dr. P. A. H. Franklin and M. F. Murray spent several days of this week at the Log Cabin and Gold Development company properties on Gold Mountain. They report that work is progressing nicely in all three tunnels, and that the new air compressor is working nicely. working nicely

#### MINING AT AMERICAN FORK.

#### Shipments From Pittsburg Begin-Others to Follow.

(Special to The Herald.) (Special to, The Herald.)

American Fork, Aug. 27.—H. C. Johnson and James Chioman, jr., with E. H. Stout and M. O. Randolph, mining experts, left here last night for American, Fork canyon on a trip of inspection. Their main object is to inspect the Clipper and Silver King, but while there they will visit a number of other properties.

Dr. J. H. Holden, wife and son, Harry, who have been in the canyon for the biggest part of the summer, came down Friday. Dr. Holden is one of the principal owners of the Dutchman and The Rog. who have been in the canyon for the bigpest part of the summer, came down Friday. Dr. Holden is one of the principal
owners of the Dutchman and The Bog
mines, the latter of which opened up a
body of ore in the past few days.

The first ore from the Pittsburg reached
American Fork Wednesday. The lumber
chute to slide the ore from the mine to
the wagon road has been completed and
shipments will be made regularly now, as
the mine has a large amount of ore ready
for shipment.

The Wyoming mine, in American Fork
canyon, is shipping at the rate of about
four cars of ore a week, and has about
twenty-five or thirty teams hauling all
the time from the mine to the cars. It
has about fifty miners employed at the
mine steadily, working two shifts. The
Pittsburg has begun shipping, and there
are probably a dozen other properties in
the canyon that have from six to twenty
men employed.

The strike that was made in the Silver

men employed.

The strike that was made in the Silver Glance, at the head of what is known as the Major Evans guich, about a week ago, is opening up well, and it is believed shipments from the property will soon be forthcoming. uns in value about 160 ounces silver and 2 per cent lead. The ground is a patentd property and owned by Salt Lake menJ. H. Wootton, C. W. Earl, W. H. Grant
and Matthew Richards. Local men have
bond and lease on the property at presnt. The vein is exceedingly well defined
and has the distinction of being the first
of the character of any importance found
and the Major Evans a number of years
go.

built since the time of the trans-continental lines.

The road not only opens up a practically undeveloped region and one until a year ago upprospected in any thorough way, but it is a needed direct communication between the intermountain interests and the southwest, which is today a very important mining and investing section.

The new line, unlike most new roads, is substantially finished and is equipped with the best in the way of cars that can be obtained today. Through trains offer a service as good as on any eastern line, and the heavy rails and good roadbed insure comfortable travel, a pleasant surprise to the traveler who has been led to previous experience on new roads or report of the friends of rival routes to expect a hard trip.

The country through which the road asses is interesting to the traveler, and, barring occasional too great amoition of the thermometer, the trip is bition of the thermometer, the trip is interesting and pleasant. The company is planning to perfect its passenger service by the addition of through sleepers and more and faster trains, and by the oiling of the whole roadbed, a thing made possible by the cheap petroleum supply from the couthern California district.

### FIND LOST CABIN MINE.

#### Sheridan Business Men Discover Old Producer While Fishing.

Advices from Sheridan, Wyoming, state that G. H. Cutter and Thomas Mitchell, business men of that place, while fishing in the mountains accidentally ran into the old cabin. In it was found old newspapers dated twenty-five years ago. Further search disclosed the old tunnel and the dump, on which the men say there is a quantity of ore. They refuse to tell the exact location, but it is on top of the Big Horn mountains, between the head of Big and Little Goose creeks. Several others have been let into the secret and they have gone up to the find, leaving in the night, so no one could follow. Other parties will go up tonight. They claim to have both sold and platinum. The town is getting excited, as this follows the visit of a government inspector to another location the middle of the week. government inspector to another location the middle of the week.
